

Fencing Data Sheet

Bow top fencing

Bow top has been developed as an alternative to the Vertical bar range. The preferred solution for minimum security applications. Designed to offer strength, rigidity and durability in one product configuration to define boundaries and deter pedestrians.

Bow Top can offer the chosen solution for parks and play areas where wall mounting is advantageous.

Panels are supplied in standard 2.75m centres between posts and in heights up to 2.4m. materials are selected to compliment the height and style of the fence, typically 12mm diameter at 1.2m high & 22mm at 2.4m high, but this can also be specified by the client at the time of order.

The fence panel is secured to the support post by a tamper resistant pin, to reduce interference and vandalism on the fence line. The secure fixing makes the product a favoured and cost effective solution; enhancing the environment in community projects and housing schemes.
